

# Installation Instructions

## NGX HDMI Emulator Kit Kit #26696301

This kit contains an HDMI Emulator for your jukebox.

**Tools Required - None**

**Parts Included with this Kit**

| Item # |          | Description          | Quantity |
|--------|----------|----------------------|----------|
| 1      | 22352001 | Emulator – HDMI 720p | 1        |
|        |          | These instructions   | 1        |

**Type A**

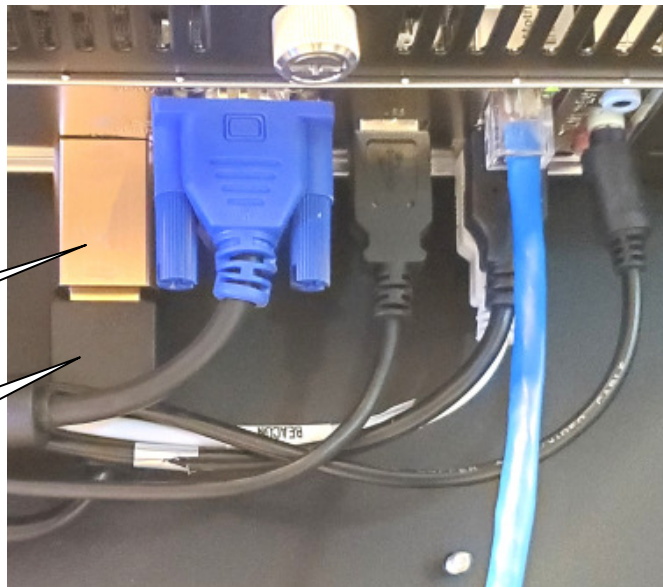

**Type B**

**Figure 1**

This kit is used to install an HDMI Emulator in your jukebox. The HDMI Emulator will configure the HDMI port on the core computer to allow properly sized video signals to be sent to external video monitors and TVs. This emulator should be used on all AMI jukeboxes configured to play Music Video Selections except jukeboxes that already have an AMI Video Splitter installed. Type A and type B emulators work exactly the same way, they just have a different look.

**Note:** Do not install the HDMI Emulator in a jukebox that does not have an external monitor plugged into the emulator. Installing the emulator enables Music Video Selections. Without an external monitor plugged in, Music Video Selections cannot be seen. Only the audio will be heard.

**Installation:** Plug the HDMI Emulator into the HDMI port of the core computer. Plug your external monitor/TV HDMI cable into the HDMI Emulator. Or, you can connect an HDMI splitter (not provided) into the HDMI emulator then connect several external monitors/TVs to the splitter. Reboot the core computer.
